PROFILE

I am a graduate of a Diploma III in Information Technology from Politeknik 'Aisyiyah Pontianak, with competencies in System Analysis, Web Development, Mobile Development, and Leadership. I possess strong abilities in analyzing business requirements, designing system workflows and architectures, developing web- and mobile-based applications, and implementing effective and efficient technology solutions. Experienced in working collaboratively through various projects and organizational activities, I am accustomed to taking initiative, communicating effectively, and solving problems systematically. I am highly committed to continuous self-development, lifelong learning, and enhancing my technical and professional competencies to deliver meaningful value to a company.

-

PROJECT EXPERIENCE

- **Village and Regional Government Reporting System**

An integrated system for managing reports, follow-ups, and issue resolution across villages and regional government agencies (OPD).

1. Administrator: Managed the system, users, reports, monitoring, and verification processes.
2. OPD Admin: Created, managed, and monitored reports submitted by regional government agencies.
3. Technician: Handled reported issues, executed resolutions, and updated the status of completed reports.

- **Warehouse Management System**

An integrated system for managing inventory, products, warehouses, and warehouse transactions.

1. Administrator: Managed users, master data, and overall system operations.
2. Owner: Monitored overall operations, inventory, transactions, and reports.
3. Warehouse Manager: Supervised warehouse activities and operational performance.
4. Warehouse Admin: Managed products, incoming and outgoing stock, and warehouse transactions.

- **Asset Management System**

An integrated system for managing campus asset inventory, borrowing, and monitoring.

1. Administrator: Managed asset data, users, borrowing requests, and overall system operations.
2. Management: Monitored assets, borrowing activities, and overall reports.
3. Lecturer: Submitted and monitored asset borrowing requests for academic purposes.
4. Student: Submitted and monitored asset borrowing requests based on their needs.

- **Point of Sale (POS) System**

An integrated system for managing sales, products, inventory, and store transactions.

1. Administrator: Managed users, products, inventory, and overall system operations.
2. Owner: Monitored sales, inventory, transactions, and business reports.
3. Supervisor: Supervised store operations, cashier activities, and transactions.
4. Cashier: Processed sales transactions and customer payments.

- **AI-Powered Anemia Detection & Analysis System**

An AI-powered system for initial anemia risk screening, analysis, and personalized health recommendations.

1. User: Provided personal information and completed a screening questionnaire to receive an initial risk assessment.
2. AI Agent: Analyzed screening results and generated health recommendations based on the collected data.
3. Midwife: Provided health education and follow-up guidance based on the analysis results.
